How to make JDBC connection in Selenium:

```java
MysqlDataSource dataSource = new MysqlDataSource();
            dataSource.setDatabaseName("test");
            dataSource.setUser("root");
            dataSource.setPassword("");
            dataSource.setServerName("localhost");
            java.sql.Connection conn = dataSource.getConnection();
            java.sql.Statement stmt = conn.createStatement();
            ResultSet rs = stmt.executeQuery("SELECT id FROM test.user");

            while (rs.next()) {
                int x = rs.getInt("id");
                System.out.println(x);
            }
```
